

Oxidative Stress Can Impact Conception. Kaneka Ubiquinol® Offers Support.

Ubiquinol promotes male and female reproductive health^{1,2}

About **1 person in 6** has trouble conceiving.³

Oxidative stress, a key contributing factor in conception difficulty,^{4,5} occurs when byproducts of cellular energy generation overwhelm the body's antioxidant defenses.^{6,7} It can negatively affect sperm health, oocyte (egg cell) function, and overall reproductive biology.^{4,5,8}

For your patients struggling with conception, go beyond conventional CoQ10^{9,10}

Ubiquinol, the active antioxidant form of CoQ10, is vital to producing cellular energy and neutralizing oxidative stress.^{6,11-14}

Unlike the form of CoQ10 in conventional supplements, Kaneka Ubiquinol®:

- **Requires no conversion** to perform its antioxidant functions^{13,15}
- Offers **enhanced absorption and bioavailability**¹⁶
- Is **3x better absorbed**^{9,10}

Kaneka Ubiquinol® enhances sperm quality^{17,18}

Compared to baseline, men who took Kaneka® Ubiquinol 150-200 mg/day for 6 months had:

- 26% better sperm motility^{17,a}
- 53% increase in sperm count^{17,a}
- Improved sperm morphology^{18,b}

^a Open-label study. ^b Retrospective study.

Ubiquinol supports oocyte health^{2,19}

- Oocytes have more mitochondria than any other cell²⁰
- Oxidative stress can damage mitochondria,⁸ vital for oocyte function²¹
- **Ubiquinol supports healthy mitochondrial energy synthesis**^{2,19}

Kaneka Ubiquinol®: Trusted Worldwide for Quality, Safety, and Authenticity

100+

published human
clinical studies

50 years

of CoQ10 research
and testing

Trusted by
200+ brands

Bioidentical
to the body's
natural ubiquinol

Made in the USA
in a state-of-the-art
facility

Tell your patients to look for the Kaneka Quality Seal

To ensure authenticity and the highest quality, tell your patients to look for the Kaneka Quality Seal on supplement packaging and the name "Kaneka Ubiquinol®" in the Supplement Facts panel.
